BackTrack provides a large collection of security-related tools, from port scanners to security audits. The tools are divided into 12 categories, such as: - Information Gathering - Vulnerability Assessment - Exploitation Tools - Rights Escalation - Maintaining Access - Reverse Engineering - RFID Tools - Stress Testing - Forensics - Reporting Tools - Services - Miscellaneous BackTrack was in development between 2006 and 2012 by the Offensive Security team. Versions up to 3.0 were based on Slax, and then (4.0) it has been moved to Ubuntu as its base. The last version of BackTrack is 5 R3, available in two variants: GNOME 2 and KDE, both for i686 and amd64 CPU. In March 2013, the Offensive Security team rescheduled the project to Debian and redist against it for Kali Linux. BackTrack was an open source Linux distribution that could be used by security professionals for penetration testing and digital forensics tasks in a native computing environment dedicated to hacking. It was officially discontinued in February 2014. Distributed as 32-bit/64-bit Live DVDs with GNOME and KDE Thanks to Softpedia, users can still download BackTrack Linux and install it on their personal computers or laptops. It is distributed as four Live DVD ISO images that support the GNOME and KDE desktop environments, as well as both 64-bit and 32-bit architectures. Boot options Live DVDs have a custom boot menu that allows users to start the live environment in stealth mode (without network connection), forensics mode (without drive or swap mount), text mode, safe mode, as well as to start the existing OS or test RAM for errors. When you start the live DVD, users will be dropped to a shell prompt, where they must perform the startx command in order to participate in the live session, which provides users with a traditional desktop environment (KDE or GNOME). The world's best penetration testing tools The distribution has been heavily adapted for use in real life penetration testing tasks. It includes a large collection of security-oriented applications and provides users with two popular desktop environments. As a matter of fact, it is the only Linux distribution in the world that contains so many security programs. It is aimed at experts and novice security users alike. The security-oriented applications have been arranged in 12 categories: information gathering, vulnerability assessment, exploitation tools, rights escalation, retention of access, reverse engineering, RFID tools, stress tests, forensics, reporting tools, services and Over 1 million times on Softpedia Whether you use this system to learn new hacking techniques, exploit servers, hack wireless networks, or perform a web app assessment, BackTrack is the number one solution for all your security needs.
